**Family Types:** OPA 336RKTF01-P, OPA 336RKTF10-P, OPA 336RKTF23-P, OPA 336RKTF32-P

**Modified Issue:** 180125.01

---

This read me document is provided for the purpose of parameter clarification. The temperzone product range is diverse and each group of units require unique parameters within their Revit Family to help define them. Parameters you may need help understanding are discussed below.

### Graphics Properties

The 'Graphics' instance parameter tick boxes, displayed within this family, are not a list of all the options available for this product. The purpose of these tick boxes is for the correct display of the products external geometry when any combination of specific options have been selected, and also to ensure the correct placement and sizing of connectors where applicable, therefore understanding these variations is important. If an available option for this product does not appear within the 'Graphics' properties list e.g. Electric Heat or Filters, then its inclusion does not effect the overall external geometry of the unit or its connectors.

The following are explanations for each of the 'Graphics' properties tick boxes within this family:

#### Fresh Air Weatherhood

Only tick this box when the unit has the standard Fresh Air Weatherhood installed. Ensure that the '*Economiser Kit Weatherhood*' tickbox is not ticked at the same time. Clearances will automatically adjust.

#### Economiser Kit Weatherhood

Only tick this box when the unit has the standard Economiser Kit Weatherhood installed. Ensure that the '*Fresh Air Weatherhood*' tickbox is not ticked at the same time. Clearances will automatically adjust.

### Mounting Points

Four Mounting points for this unit are located on the underside of the unit.

### Connector Element Properties

Care has been taken to provide connector elements that are functional. Within this family you will find instance parameters, mapped to connectors, have been set to zero to allow for end user input. It is the end users responsibility to enter accurate data, for individual products, as required, into these fields. This data can be found within the Revit Family 'Type Properties', or within temperzone's technical data manuals and unit selection programmes. Visit [www.temperzone.biz](http://www.temperzone.biz) or contact your Temperzone representative to access this information.
