# Air Cooled Packaged units

## OPA 465 - 960 ECO

Packaged rooftop HVAC units provide the flexibility and performance demanded in open plan commercial environments. Key benefits are noise isolation from occupied areas, ease of fresh air integration, and the reliability and durability inherent in a factory assembled packaged system. The OPA 465–960 range efficiently delivers controlled indoor environments from -15°C to +52°C ambient conditions.

# Air Cooled Packaged units

## OPA 465 - 960 ECO

### Applications

Specifically developed for air conditioning of commercial premises i.e. supermarkets, shopping malls, auditoriums and restaurants

### AIR FLOW SELECTION

If air returning to the indoor coil is regularly expected to be above 50% relative humidity then the coil face velocity should be limited to 2.5m/s or less (refer fan curves page 8 & 9).

Consideration must be given to selecting an airflow and coil face velocity that avoids water carry - over problems, i.e. in high humidity (tropical/subtropical) conditions or when heavily moisture laden fresh air is introduced.

Applications using complete or high proportion of fresh air should be discussed with a Temperzone sales engineer to establish the correct selection of unit.

### FEATURES

#### General

Each ECO unit include EC plug fans and variable capacity compressor technology (digital).

#### Refrigerant R410A

R410A used which has zero ozone depletion potential.

#### Economy

The units have 2 independent refrigeration circuits to provide the flexibility & economy of 2 stage operation i.e. utilizing 1 or 2 circuits as conditions vary, plus staggered starting.

An economiser option is available to comply with the National Construction Code (Aust.).

#### Efficiency

Heat exchange coils incorporate inner grooved (rifled) tube for superior heat transfer.

The indoor coil is interlaced for efficient part load performance.

#### Performance

These Digital systems include a digital scroll compressor and a conventional scroll compressor (nb OPA 855 & 960 have two digital). ECO units provides a variable capacity ability that enables close control of room temperature.

ECO units include highly efficient EC plug fans and provide high static capability for a wide range of indoor air flows. Continuous range fan speeds are achieved via a 0-10V DC signal (by others). They also make commissioning and air balancing easy.

Digital technology is particularly suitable for applications requiring full or high proportions of fresh air, VAV, close control and supply air temperature control.

Head pressure control technology ensures appropriate condenser pressures are maintained, through the control of airflow.

#### Quiet

Extensive use of insulation ensures a quiet unit.

# Air Cooled Packaged units

## OPA 465 - 960 ECO

### Insulation

Closed cell foam insulation is used in indoor air section to ensure no particles in the air stream. The insulation is foil faced & meets fire test standards AS1530.3 (1999) & BS 476 parts 6 & 7.

### Durable

The cabinet and drain tray are constructed from high grade galvanized steel-polyester powdered coated (Grey) for all weather protection. External fasteners are marine grade steel.

Heat exchange coils comprise aluminium plate fins on mechanically expanded rifled copper tube. Outdoor and indoor coil fins are epoxy coated for extra protection in corrosive environments i.e. salt laden sea air. Coil protection guards protect against hail, accidental damage or vandalism.

Fan motor bearings are sealed for life so as not to incur regular maintenance.

### Easy Access

These packaged outdoor units are typically installed on a rooftop, where maintenance access is relatively easy during operating hours.

### Self Diagnosis

The unit controller (UC8) has a display of LEDS to indicate faults & running conditions. A common fault indicator is included for interface to external systems.

### Control Options (ECO version)

Commissioning is made easier when the EC motor to be controlled variably by a 0-10 volt DC signal that can be supplied either by a BMS system, a sophisticated controller or temperzone's optional TZT-100 Controller. The systems' UC8 controller is BMS compatible with multi-unit control possible – either via digital and analogue signals or via Modbus/485. A BACnet/IP option is available.

## OPTIONAL EQUIPMENT

1. TZT-100 thermostat.
2. Filters rated to AS1324.1.2001 - G4 disposable or washable.
3. Factory fitted economiser -includes dampers, fresh air cowl.
4. Electronic control systems (available by arrangement) for temperature and economy cycle.
5. Factory fitted adjustable fresh air damper and cowl.
6. High static condenser fans for situations where there is external resistance from ducting the outside air, eg plant rooms.
7. Interface to BACnet/IP networks.
8. Alternative supply and return air configurations (refer page 15).

## SAFETY FEATURES

1. HP & loss of refrigerant protection
2. Anti rapid cycle timer internal overload for compressor protection
3. Circuit breaker control circuits
4. Time & temperature controlled electronic de-ice switch prevents icing up of the outdoor coil during heating cycle
5. Frost protection on cooling cycle
6. Sensor fault indication
7. Crankcase heater prevents liquid refrigerant condensing in the compressors during the "off" cycle
8. Compressor minimum run time to ensure oil return
9. 24V control circuit
10. Phase rotation protection device

## COMPRESSORS

Digital compressors have a greater variable capacity ability. This is achieved by avoiding on/off cycling of the compressor. These compressors have proven very reliable because of their design simplicity.

Each high efficiency scroll type compressor is hermetically sealed quiet running and supported on rubber mounts to minimize vibration

## WIRING

The electrical supply required is 3 phase 400V ac 50Hz.

The units control panel is fully wired ready to accept the main power supply.

## ECONOMISER OPTION

The factory fitted Economizer damper option is supplied with drive open /drive closed damper motors. Temperzone can supply or supply and fit controls to manage the operation of the Economy Cycle, using either temperature or enthalpy to control the operation of the dampers. For the best result, discuss with your Temperzone Sales Engineer.

# Air Cooled Packaged units

## ECO Performance Data

### COOLING CAPACITY (kW)

TC = Total Capacity (kW).

SC = Sensible Heat Capacity (kW).

PI = Power Input (kW)

E.A.T. = Entering Air Temperature .

= Nominal Capacity (kW) @ load specified

Nominal Air Flow: **3700 l/s**

**Note:** Capacities are **gross** and do not include allowance for fan motor heat loss.

## ECO Performance Data

### AIR HANDLING

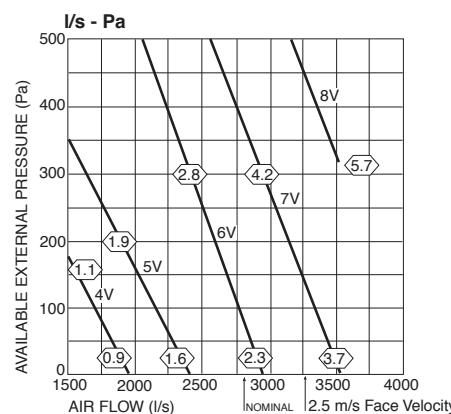

**Note:** Airflows are for a dry coil. Reduce airflow by 10% for wet coil conditions. In a free blow or low resistance application, beware of exceeding indoor fan motor's full load amp limit (refer to page 21). As filters are optional, the fan air flows given are for units installed without filters.

Amps
